Analytics: Cookie Leakage (TS//SI)

Use cookies to identify Tor users when they are not using Tor

- Current: preliminary analysis shows that some cookies “survive” Tor use. Depends on how target is using Tor (Torbutton/Tor Browser Bundle clears out cookies).
- Goal: test with cookies associated with CT targets
 - Idea: what if we seeded cookies to a target?
 - Investigate Evercookie persistence

Browser Fingerprinting <https://coveryourtracks.eff.org/>

Our tests indicate that you are not protected against tracking on the Web.

IS YOUR BROWSER:

Blocking tracking ads?	<u>No</u>
Blocking invisible trackers?	<u>No</u>
Protecting you from <u>fingerprinting</u> ?	<u>Your browser has a unique fingerprint</u>

'Incognito Mode'

You've gone Incognito

Now you can browse privately, and other people who use this device won't see your activity. However, downloads, bookmarks and reading list items will be saved. [Learn more](#)

Chromium won't save the following information:

- Your browsing history
- Cookies and site data
- Information entered in forms

Your activity might still be visible to:

- Websites you visit
- Your employer or school
- Your internet service provider

Block third-party cookies
When on, sites can't use cookies that track you across the web. Features on some sites may break. ☐

\$5 billion Google lawsuit over 'Incognito mode' tracking moves a step closer to trial

Another issue going against Google's arguments that the judge mentioned is that the plaintiffs have evidence Google "stores users' regular and private browsing data in the same logs; it uses those mixed logs to send users personalized ads; and, even if the individual data points gathered are anonymous by themselves, when aggregated, Google can use them to 'uniquely identify a user with a high probability of success.'"

Probe reveals previously secret Israeli spyware that infects targets via ads

Oh s#!t, Sherlock

 [Jessica Lyons Hardcastle](#)

Sat 16 Sep 2023 // 09:05 UTC

Israeli software maker Insanet has reportedly developed a commercial product called Sherlock that can infect devices via online adverts to snoop on targets and collect data about them for the biz's clients.

This is according to an investigation by [Haaretz](#), which this week claimed the spyware system had been sold to a country that is not a democracy.
